

# Jace K. Mixon

Software Engineer | Cloud-Native Applications & Distributed Systems  
Coral Springs, FL · kaulana.mixon@gmail.com · (954) 849-5273  
linkedin.com/in/jace-mixon

## PROFESSIONAL SUMMARY

Software Engineer with 4 years of experience modernizing enterprise applications and delivering scalable cloud-native and distributed systems. Experienced in C#, SQL, REST APIs, CI/CD, Kubernetes, and Azure, with demonstrated success improving application performance and production reliability. Collaborates across product, architecture, security, and engineering teams throughout the software development lifecycle.

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                 |

| <b>JM Family Enterprises</b><br><i>Software Engineer</i>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Deerfield Beach, FL<br>September 2022 - Present |
| <ul style="list-style-type: none"><li>Implemented reusable Bicep modules and AKS deployment configurations used to modernize 51 enterprise applications within a one-year migration program from AWS to Azure.</li><li>Developed event-driven integrations using Azure Service Bus and standardized API delivery through Azure API Management across business-critical distributed applications.</li><li>Diagnosed application bottlenecks and optimized SQL queries, reducing calculation runtimes by 60% while delivering 20 production enhancements.</li><li>Built and maintained CI/CD workflows supporting 55 repositories across 8 production applications in GitHub Enterprise, GitLab, and Azure DevOps.</li><li>Debugged lower-environment and production incidents through application monitoring, root-cause analysis, and targeted code and configuration fixes.</li><li>Collaborated with business stakeholders, architects, security teams, and engineers to design reusable, performant, and resilient solutions.</li><li>Mentored junior developers through code reviews, architecture discussions, and reusable engineering patterns.</li></ul> |                                                 |

## TECHNICAL SKILLS

|                           |                                                                |
|---------------------------|----------------------------------------------------------------|
| Languages:                | C#, Python, Java, C, JavaScript, SQL                           |
| Cloud & Containers:       | Azure, AWS, Docker, Azure Kubernetes Service (AKS)             |
| Data, APIs & Integration: | SQL, MongoDB, Azure Service Bus, Azure API Management, Swagger |
| DevOps:                   | Bicep, Git, GitHub Enterprise, GitLab, Azure DevOps            |
| AI:                       | GitHub Copilot, Claude Code                                    |

## SELECTED PROJECTS

|                                                                                                                                                                                                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Budget Master</b> <i>MongoDB, Express, React, Node.js, Swagger/OpenAPI</i>                                                                                                                                         |
| Designed and launched a full-stack budgeting application with REST APIs documented with Swagger/OpenAPI and MongoDB persistence, enabling users to record income and expenses and monitor their financial activity.   |
| <b>Smart Meal Planner</b> <i>SQL, React, Java, Spring Boot API</i>                                                                                                                                                    |
| Created a personal, weekly meal planner using a React frontend and a Java and SQL backend that includes a recipe repository, drag-and-drop schedule, unit conversion, pantry inventory, and generated shopping lists. |
| <b>Project Everglades</b> <i>TensorFlow, PyTorch, Python, OpenAI</i>                                                                                                                                                  |
| Developed and evaluated reinforcement learning algorithms that achieved a 90% win rate against competing teams' code in Lockheed Martin's Project Everglades strategy simulation.                                     |

## AWARDS

|                                                                                                                                          |
|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>JM Family Game of Codes Hackathons:</b> 2nd Place, OCR repair-order mobile experience (2022); 3rd Place, AI chatbot assistant (2024). |
|------------------------------------------------------------------------------------------------------------------------------------------|
